AI Summary

Analytical classification

- **Description:** No threats detected in the analyzed email file.
- **Tags & interpretation:** Not provided
- **Threat level:** No threats detected
- **Main analyzed object:** Unknown URL

Executive summary

The analysis of the email file `sample-100.eml` shows no malicious behavior. The file was opened in Microsoft Outlook, which launched a Microsoft Office component, but no suspicious activity or threats were detected.

Attack chain

1. The email file `sample-100.eml` was opened in Microsoft Outlook.
2. Outlook launched the Microsoft Office component `ai.exe` with specific parameters.
3. No further activity or transitions were observed in the execution summary.

Infrastructure & techniques

The execution summary shows a standard interaction with a Microsoft Office email file. The `ai.exe` component is part of the Microsoft Office suite and is used for handling email-related tasks. No suspicious infrastructure or malicious behavior

was observed. The Microsoft Office components and their associated processes are legitimate and do not indicate any threat.

The execution summary does not show any malicious infrastructure or suspicious activity. The processes involved are standard Microsoft Office components and do not suggest any threat or phishing attempt.

Conclusion

The analysis of the email file `sample-100.eml` did not detect any threats. The observed behavior is consistent with standard Microsoft Office operations. The most practical takeaway is that the file does not appear to be malicious, and no further investigation is warranted.
